

A CTL Event - AI Prompt Engineering

Feb. 07 @ 2:00 PM
Moody Life Science 101

[ATS.STMARYTX.EDU/CTL](https://ats.stmarytx.edu/ctl)

This session will explore basic approaches for crafting effective prompts for large language models (LLMs) such as ChatGPT, Microsoft Copilot, and Google Bard.

The primary session objective is to write effective prompts through specificity and detailed-oriented input to produce more accurate and desirable outputs. Ideas for learning activities and pedagogical/andragogical strategies will also be discussed. For a practical hands-on experience, participants are encouraged to create a free ChatGPT 3.5 account and bring their laptops to experiment with customized prompts.

John Solis, Ph.D.
